ULTRA Surround

Perfect Black, Explosive Colour in 4K UHD

Overview

The revolution has begun.

Combining incredible picture quality with an ultra-premium, Picture-on-Glass design, the LG E6T OLED TV redefines the art of television.

Why is OLED TV different?

LED/LCD TVs use a technology that includes a backlight, so the black scenes are diluted by this lighting that often makes black look charcoal grey. LG OLED TV has no backlight. It delivers pure black and with that comes explosive colour.

See the difference for vourself in store now

Sound Bar Stand

The modern 2.2 channel, 40W sound bar speaker integrates into the elegant stand. Enjoy rich and deep sound in every scene.

HDR - High Dynamic Range

View HDR content to see enhanced graduation of contrast in the light and dark areas of an image as well as the colour to create a new level of realism.

Picture-on-Glass

Picture-on-Glass is made possible by a bold new approach to television design. The OLED module is applied directly to the glass back panel for a clean, ultra-slim profile.

Dolby Vision™

Look for movies and TV shows in Dolby Vision streamed on Netflix, that takes HDR footage to a new level. The picture is dynamically optimised scene by scene to deliver refined detail, natural contrast and stunning colour.

No Backlight

With no backlight, the perfectly black background propels incredibly explosive colours. In fact, a billion colours. Just brilliant!

Smart TV Built-In

LG brings you an incredible range of streamed content with webOS 3.0 Smart TV* including Netflix, Stan, ABC iView and YouTube. Plus, it's built-in, without the need for a set top box or media player connected by cable.

Notes:

* Internet connection & streaming services membership (where applicable) required. Internet usage charges and conditions apply.

Freeview Plus uses HbbTV technology which combines broadcast and broadband streaming. Contents and features will vary from time to time without notice. webOS internet browser supports HTML5, VP9 and HEVC.
