1. Features

This product is a communication kit that bridges LG's air conditioning outdoor unit to a third party indoor unit functioning based on the return air temperature control. In installation scenes where AHU (Air Handling Unit) is designed with DX (Direct Expansion) Coil, the PAHCMR000 will control the return air temperature by measuring the inlet and outlet temperatures of the DX coil and acting on the outdoor unit and the expansion unit.

The features of Return air temperature control Communication Kit are as follows:

- It can be combined with various heat source products such as air heat source, water source, etc., and it
 provides wide capacity.
- It controls the EEV (Electronic Expansion Valve).
- It measures the return air temperature through the enclosed temperature sensor and controls the outdoor unit to secure the demanded return air temperature.
- It can be directly connected to DDC without a separate control module, so DDC can receive product control
 and status information through Modbus communication or by digital input and output.

1.1 Return Air Temperature Control

■ Model Names : PAHCMR000 / PAHCMC000

Return air temperature communication kit consists of control box case and communication module.

<PAHCMR000>

<PAHCMC000>

1.2 Discharge Air Temperature Control

■ Model Names: PAHCMS000 / PAHCMM000+PAHCMC000

Discharge air temperature communication kit consists of control box case, main module and communication module. In the product package, main module and communication module are included.

<PAHCMM000(left) / PAHCMC000(right)>

2. Nomenclature

Model Name	Р	AH	СМ	R	000
No.	1	2	3	4	5

No.	Signification
1	Accessory with AHU
	P : Accessory model
2	Product Type I
	AH : for Air Handling Unit
3	Product Type II
3	CM : Communication Module
	Control Method
4	R : Return air control S : Discharge (Supply) air control M : Main module C : Communication module
5	Serial Number

3. Specifications

4.1 Return Air Temperature Control

4.1.1 LG Control : Fixed $T_e + T_r$ or T_{Room}

A fixed evaporating or condensing temperature of a DX coil (T_e) can be controlled by either return air temperature (T_r) or room air temperature (T_{Room}) . A fixed target evaporating or condensing temperature can be changed in MULTI V outdoor unit setting.

■ Required Item

	Expansion Valve	Wired Remote Controller	Central Controller
MULTI V	EEV	0	Optional
Single Split	Not Requred	0	Optional

■ Function List

	Function List	LG Remote Controller	LG Central Controller
	Operating On/Off	0	0
	Operation Mode	0	0
	Return Air Temperature	0	0
Control	Discharge Air Temperature	X	X
	Forced Thermal On/Off	X	X
	Capacity Control	X	X
	Emergency Stop*	X	O*
	Operating On/Off	0	0
	Operation Mode	0	0
	Return Air Temperature	0	0
Monitor	Discharge Air Temperature	X	X
	Defrost status	0	X
	Error Alarm	0	0
	Compressor On/Off	0	X

Note

 $1.\ O: Applied,\ X: Not\ applied\ ,\ See\ detail\ model\ name\ in\ `Accessory\ Compatibility\ List'\ in\ this\ PDB$

2. *: Emergency Stop function is available for AC Ez Touch, AC Smart, ACP.

4.1.2 DDC Control by Contact Signal : Fixed $T_e + T_r$ or T_{Room}

1) Note: When DDC control AHU Controller by contact signal, the control commend of LG central controller will be disregarded.

The DDC controls return air temperature (T_r) or room air temperature (T_{Room}) by transferring AI / DI / DO signal to the AHU Communication Kit for Return air control. A fixed target evaporator or condensing temperature (T_e) can be changed in MULTI V outdoor setting. LG wired remote controller and LG Central Controller can be optionally applied, but only monitoring function is possible.

Required Item

	Expansion Valve	Wired Remote Controller	Central Controller
MULTI V	EEV	Optional (Monitoring only)	Optional (Monitoring only)
Single Split	Not Requred	Optional (Monitoring only)	Optional (Monitoring only)

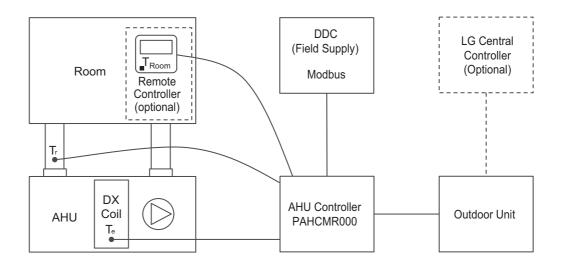

■ Function List

	Error Alarm	0	0	0
	Compressor On/Off	X	0	X

Note

1. O : Applied, X : Not applied, See detail model name in 'Accessory Compatibility List' in this PDB

4.1.3 DDC Control by Modbus RTU : Fixed $T_e + T_r$ or T_{Room}

The DDC controls return air temperature (T_r) or room air temperature (T_{Room}) by transferring Modbus signal to the AHU Communication Kit for Return air control. To control room air, the LG wired controller can be purchased optionally. A fixed target evaporator or condensing temperature (T_e) can be changed in MULTI V and Single outdoor setting.

Required Item

	Expansion Valve	Wired Remote Controller	Central Controller
MULTI V	EEV	Optional	Optional
Single Split	Not Requred	Optional	Optional

■ Function List

	Function List	Modbus Comm. type (DDC)	LG Remote Controller	LG Central Controller
	Operating On/Off	0	0	0
	Operation Mode	0	0	0
	Return Air Temperature	0	0	0
Control	Discharge Air Temperature	Х	Х	Х
	Forced Thermal On/Off	Х	Х	Х
	Capacity Control	Х	Х	Х

Monitor	Discharge Air Temperature	Х	X	Х
	Defrost status	0	0	Х
	Error Alarm	0	0	0
	Compressor On/Off	0	0	Х

Note

1. O : Applied, X : Not applied , See detail model name in 'Accessory Compatibility List' in this PDB

4.2 Discharge Air Temperature Control

4.2.1 LG Control : Variable T_e + T_d

The Communication Kit for Discharge Air Temperature Control is single handedly able to perform this function.

The Communication Kit adjusts the evaporating or condensing temperature (T_e) by monitoring the supplied air temperature (T_d) in order to meet the set target temperature (T_d) .

■ Required Item

	Expansion Valve	Wired Remote Controller	Central Controller
MULTI V	EEV	0	Optional
Single Split	Not Requred	0	Optional

■ Function List

	Function List	LG Remote Controller	LG Central Controller
	Operating On/Off	0	0
	Operation Mode	0	0
Control	Return Air Temperature	X	X
Control	Discharge Air Temperature**	0	0
	ODU Capacity Control	X	X
	Emergency Stop*	X	O*
	Operating On/Off	0	0
	Operation Mode	0	0
	Return Air Temperature	X	X
Monitor	Discharge Air Temperature	0	0
	Defrost status	0	X
	Error Alarm	0	0
	Compressor On/Off	0	X

- 1. O: Applied, X: Not applied, See detail model name in 'Accessory Compatibility List' in this PDB
- 2. *: Emergency Stop function is available for AC Ez Touch, AC Smart, ACP.
- 3. **: This communication kit can control "outdoor unit capacity" Automatically to meet target 'Discharge Air Temperature'.

4.2.2 DDC Control by Contact Signal : Variable $T_e + T_d (0\sim10 \text{ V})$

The DDC can control the discharge air temperature by sending an analog input (0 to 10V) to AHU communication kitfor discharge air control. The analog signal (Voltage) will adjust the target pressure(low or high) to which the outdoor unit is running hence increasing or decreasing the target temperature (T_e).

■ Required Item

	Expansion Valve	Wired Remote Controller	Central Controller
MULTI V	EEV	Optional (Monitoring only)	Optional (Monitoring only)
Single Split	Not Requred	Optional (Monitoring only)	Optional (Monitoring only)

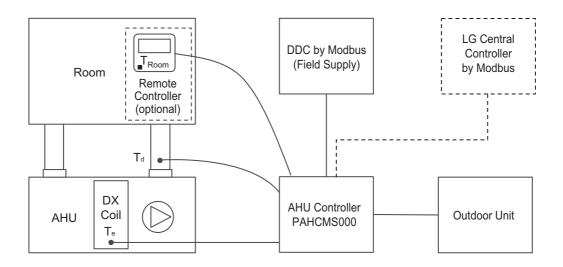

■ Function List

	Function List	Contact Signal type (DDC)	LG Remote Controller	LG Central Controller
	Operating On/Off	0	Х	X
	Operation Mode	0	Х	X
Control	Return Air Temperature	Х	Х	X
Control	Discharge Air Temperature	X	Х	X
	Capacity Control	0	Х	X
	Emergency Stop	0	Х	X
	Operating On/Off	0	0	0
	Operation Mode	X	0	0
	Return Air Temperature	Х	Х	X
Monitor	Discharge Air Temperature	X	0	0
	Defrost status	0	0	X
	Error Alarm	0	0	0
	Compressor On/Off	0	0	X

Note

1. O : Applied, X : Not applied , See detail model name in 'Accessory Compatibility List' in this PDB

4.2.3 DDC Control by Modbus : Variable $T_e + T_d$

The DDC can control the discharge air temperature (T_d) by sending Modbus signal to AHU communication kit for discharge air control. The Modbus signal will adjust the target pressure(low or high) to which the outdoor unit is running hence increasing or decreasing the target temperature (T_e).

■ Required Item

	Expansion Valve	Wired Remote Controller	Central Controller
MULTI V	EEV	Optional	Optional
Single Split	Not Requred	Optional	Optional

■ Function List

	Function List	Modbus Comm. type (DDC)	LG Remote Controller	LG Central Controller
	Operating On/Off	0	0	Δ
	Operation Mode	0	0	Δ
Cambral	Return Air Temperature	X	X	Х
Control	Discharge Air Temperature	0	0	Δ
	Capacity Control	0	X	Х
	Emergency Stop*	X	X	Δ
	Operating On/Off	0	0	0
	Operation Mode	0	0	0
	Return Air Temperature	0	X	Х
Monitor	Discharge Air Temperature	0	0	0
	Defrost status	0	0	Х
	Error Alarm	0	0	0
	Compressor On/Off	0	0	Х

Note

 $1.\ O: Applied,\ X: Not\ applied\ ,\ See\ detail\ model\ name\ in\ `Accessory\ Compatibility\ List'\ in\ this\ PDB$

 ^{△:} LG Central Controller can control these functions also, but DDC should have main responsibility for control.
 See detail model name in 'Accessory Compatibility List' in this PDB

5. Capacity Index & Combination Ratio

5.1 Capacity Index

5.1.1 MULTI V

Capacit	v indov	Heat	exchanger	capacity (kB	tu/h)	Heat exchanger capacity (kW)

76.0	22.4	54.1	76.0	61.6	85.5	15.9	22.4	18.1	25.2
96.0	28.0	76.1	96.0	85.6	108.0	22.5	28.0	25.3	31.5
115.0	33.6	96.1	115.0	108.1	129.4	28.1	33.6	31.6	37.8
134.0	39.2	115.1	134.0	129.5	150.8	33.7	39.2	37.9	44.1
153.0	44.8	134.1	153.0	150.9	172.1	39.3	44.8	44.2	50.4
172.0	50.4	153.1	172.0	172.2	193.5	44.9	50.4	50.5	56.7
192.0	56.0	172.1	192.0	193.6	216.0	50.5	56.0	56.8	63.0

Note

Heat exchanger capacities are based on the following conditions:

- 1. Cooling
 - Indoor Ambient Temp. 27 °CDB / 19 °CWB, Outdoor Ambient Temp. 35° CDB / 24 °CWB
 - Condensing temperature (tc) 45 °C, Subcool (SC) 15 K, Evaporating temperature (te) 6 °C, Superheat (SH) 3 K
 Interconnecting piping length 7.5 m and difference of elevation (outdoor ~ indoor unit) is 0 m.
- 2. Heating
 - Indoor Ambient Temp. 20 °CDB / 15 °CWB, Outdoor Ambient Temp. 7 °CDB / 6°CWB
 - Hot gas inlet temperature 65 $^{\circ}$ C, Condensing temperature (tc) 49 $^{\circ}$ C, Subcool (SC) 5 K
 - Interconnecting piping length 7.5 m and difference of elevation (outdoor ~ indoor unit) is 0 m.

CAUTION

In case of MULTI V model for EUROPE, the setting value of 'target pressure change' function should be set as below:

- Dip switch No. 5 of MULTI V 5 On >> FUNC >> FN8 (target pressure change) >> Heat >> Off (default OP4)

5.1.2 Single Split

Canaci	ty index	Heat	exchanger	capacity (kB	tu/h)	Heat exchanger capacity (kW)			
Capaci	ty muex	Coc	oling	Cooling		Coo	ling	Heating	
kBtu/h	kW	Min	Max	Min	Max	Min	Max	Min	Max
9.0	2.5	6.5	9.0	9.0	10.8	2.0	2.5	2.5	3.2
12.0	3.5	9.1	12.0	10.9	13.7	2.6	3.5	3.3	4.0
18.0	5.0	12.1	18.0	13.8	19.4	3.5	5.0	4.1	6.0
24.0	7.1	18.1	24.0	19.5	25.4	5.1	7.1	6.1	7.5

36.0	10.0	30.1	36.0	33.9	40.3	7.9	10.0	9.1	11.2
42.0	12.5	36.1	42.0	40.4	47.0	10.1	12.5	11.3	14.0
48.0	14.0	42.1	48.0	47.1	56.2	12.6	14.0	14.1	15.8
60.0	15.0	48.1	60.0	56.3	67.2	14.1	15.0	15.9	16.8
70.0	19.0	60.1	70.0	67.3	82.5	14.9	19.0	16.9	22.4
85.0	23.0	70.1	85.0	82.6	99.8	19.1	23.0	22.5	27.0

Note

Heat exchanger capacities are based on the following conditions :

- 1. Cooling
 - Indoor Ambient Temp. 27 °CDB / 19 °CWB, Outdoor Ambient Temp. 35° CDB / 24 °CWB
 - Condensing temperature (tc) 45 $^{\circ}$ C, Subcool (SC) 15 K, Evaporating temperature (te) 6 $^{\circ}$ C, Superheat (SH) 3 K
 - Interconnecting piping length 7.5 m and difference of elevation (outdoor \sim indoor unit) is 0 m.
- 2. Heating
 - Indoor Ambient Temp. 20 °CDB / 15 °CWB, Outdoor Ambient Temp. 7 °CDB / 6°CWB
 - Hot gas inlet temperature 65 °C, Condensing temperature (tc) 49 °C, Subcool (SC) 5 K
 - Interconnecting piping length 7.5 m and difference of elevation (outdoor ~ indoor unit) is 0 m.

5. Capacity Index & Combination Ratio

5.2 Combination Ratio

■ Return Air Mixing

Combination	Total	AHU (RA Mixing)	Indoor Units	Expansion Kit
Pair (1 ODU to 1 AHU)	50 ~ 105%	~ 105%	-	EEV Kit
Multiple (1 ODU to Multiple AHUs)	50 ~ 130%	~ 130%	-	EEV Kit
Multiple (1 ODU to Multiple AHUs + Indoor units)	50 ~ 130%	~ 50% (~ 100%, exclusively for Cooling only system)	~ 130%	EEV Kit

■ 100% Fresh Air

Combination	Total	AHU (FAU)	Indoor Units	Expansion Kit
Pair (1 ODU to 1 AHU)	50 ~ 105%	~ 105%	-	EEV Kit
Multiple (1 ODU to Multiple AHUs)	50 ~ 105%	~ 105%	-	EEV Kit
Multiple (1 ODU to Multiple AHUs + Indoor units)	50 ~ 105%	~ 50%	~ 105%	EEV Kit

Note

- 1. Combination ratio (%)
 - = (Actual AHU capacity index + Indoor Unit capacity index) / Outdoor unit nominal cooling capacity

- 1. To use "Return Air Mixing" table, the 'on coil air temperature' should be within the operating range of indoor temperature. (Cooling : under 20 ℃WB. / Heating : over 15℃DB.)
- 2. If the 'air on coil' have fresh air intake, the combination ratio should be complied with the "100 % Fresh Air" table.

5.3 Outdoor Unit Compatibility

5.3.1 MULTI V

	Model		MUL	TI V	MUL WA	GHP		
		i	5	IV	S	IV	S	
AHU				•	•	•	•	•
Communication Kit Discharge air temperature control			•	•	•	•	Х	X

- 1. When connecting to Single Split outdoor unit, please check the compatibility to the regional sales office.
- 2. Discharge air temperature control AHU comm. Kit is not compatible with heat recovery system.

6. Expansion Valve Combination

6.1 Capacity Range

EEV Kit	Capacity i	ndex (kW)	AHU Comm	unication Kit	Connection by 0	ODU system
Model	Minimum	Maximum	PAHCMR000	PAHCMS000	Heat pump	Heat Recovery
PRLK048A0	3.6	28	0	0	0	0
PRLK096A0	28.1	56	0	0	0	O (Max 33.7 kW)
PRLK396A0	56.1	112	0	0	0	X
PRLK594A0	112.1	168	X	0	O (with PAHCMS000)	X

Note

O : Applied, X : Not applied

6.2 Combination guide

0	O multimetter	Compa	atibility
Case	Combination	Return Air 1)	Supply Air ²⁾
1	Multiple PRLK048A0 / PRLK096A0	0	0
2	Multiple PRLK048A0 / PRLK096A0 + IDUs 3)	0	X
3	PRLK396A0 + IDUs	Х	Х
4	PRLK594A0 + IDUs	Х	Х
5	PRLK396A0 + PRLK048A0 / PRLK096A0	Х	X
6	PRLK594A0 + PRLK048A0 / PRLK096A0	Х	X
7	PRLK396A0 + PRLK396A0 + PRLK396A0	0	0
8	PRLK396A0 + PRLK594A0	Х	X
9	PRLK594A0 + PRLK594A0 ⁴⁾	Х	0

Note

- O: Applied, X: Not applied
- 1) Return Air is for PAHCMR000 / PAHCMC000(Communication Module)
- 2) Supply Air is for PAHCMS000 / PAHCMM000(Main Module) + PAHCMC000(Communication Module)
- 3) IDUs includes Hydro Kit / DX ERV / FAU(OAU)
- 4) Even in multiple Multi V system, one main module can connect up to two PRLK594A0 units.
- e.g. '(Main Module #1 + Communication Module #1 + EEV Kit #1) + (Communication Module #2 + EEV Kit #2)'

CAUTION

- 1) IDUs/PRLK048A0/PRLK096A0 are can not be connected with PRLK396A0/PRK594A0(Big EEV) in the same ODU system.
- 2) In case of IDUs are connected with Discharge(Supply) air communication kit, the capacity of IDUs can be changed according to ODU capacity which is controlled by Discharge(Supply) air communication kit.

6. Expansion Valve Combination

6.3 DX Coil capacity selection guide

General

The capacity of DX coil can vary depending on design conditions. The diversity on DX coil capacity makes it difficult to match proper outdoor unit sizing. Often mismatching DX coil to LG outdoor system causes capacity issues on site.

To match DX coil with LG outdoor system properly,

Example of the heat exchanger (DX coil) capacity index selection procedure

1) **Step 1**:

AHU Manufacturer selects coil on air temperature with the following specifications from our side.

Use the parameters for refrigerant cycle below according to the main use of the coil.

Maximum allowed working pressure (MWP): 42 Bar.

For cooling:

- Condensing temperature (T_c) 45 °C, Subcool (SC) 15K
- Evaporating temperature (T_e) 6 °C, Superheat (SH) 3K
- Outdoor air temperature 35°CDB/ 24°CWB.
- Pressure drop range: 80 ± 30kPa.
- Interconnecting piping length 7.5m and difference of elevation (outdoor ~ indoor unit) is 0 m.

For heating:

- Hot gas inlet temperature 65 °C, Condensing temperature (Tc) 49 °C, Subcool (SC) 5
- Outdoor Air Temperature 7°CDB/ 6°CWB.
- Pressure drop range: 80 ± 30kPa.
- Interconnecting piping length 7.5m and difference of elevation (outdoor ~ indoor unit) is 0 m.

Note

- Always select pressure loss as close to maximum allowed at full capacity as possible to ensuregood pressure loss at minimal capacity
- Estimated evaporator / condenser temperature should be considered at this stage according to 6.3.2 estimated DX coil temperature of this PDB.

2) **Step 2**:

Use the capacity calculated at Step 1 to select the right ODU or IDU Capacity size.

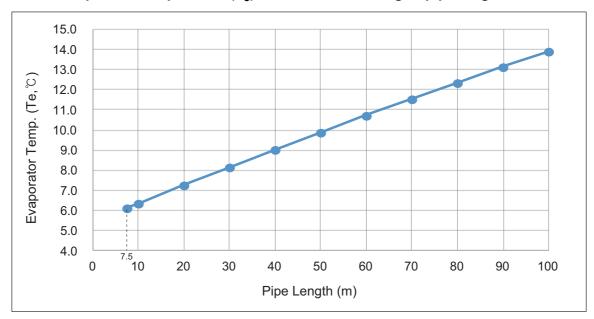

Always select the first bigger capacity from the table in 'Capacity Index' chapter with the obtained result from 'Step 1' of calculations.

If pipe length or difference is bigger than above please refer the ODU PDB for the capacity correction factor.

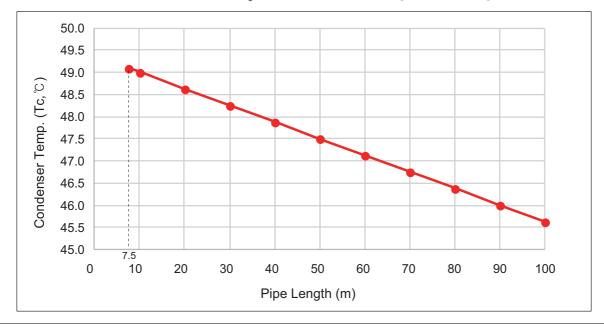

6. Expansion Valve Combination

■ Estimated DX coil temperature

♦ Estimated evaporator temperature (T_e) of DX Coil according to pipe length

◆ Estimated condenser temperature (T_c) of DX Coil according to pipe length

A CAUTION

The actual estimated refrigerant temperature may vary according to pipe (equivalent) length, pipe type, installation conditions and operation status.

7. Accessory Compatibility List

	Product	Model	Compa	atibility	Remark
	Product	Wodei	PAHCMR000	PAHCMS000	Remark
	Simple	PQRCVCL0Q(W)	0	X	
	Simple for Hotel	PQRCHCA0Q(W)	X	X	
Wired	Standard II (White)	PREMTB001	0	0

	ACP 5	PACP5A000	0	0	
	AC Manager 5	PACM5A000	O ²⁾	△ 2)	\triangle : Monitoring only when DDC control by contact signal applied
	ACP BACnet 1)	PQNFB17C0	0	Δ	△: Monitoring only
Gateway	ACP Lonworks	PLNWKB000	0	Х	
	AC Smart BACnet 1)	PBACNA000	0	Δ	△: Monitoring only
Power	PDI Standard	PPWRDB000	0	Х	
Consumption Distributor	PDI Premium	PQNUD1S40	0	Х	

Note
O: Applied, X: Not applied

¹⁾ If need to connect central controller IV series with PAHCMS000, ask to HQ.

²⁾ AC Manager can integrate ACPs or AC Smarts, ACP or AC Smart must be installed together.

8.1 Return Air Temperature Control

PAHCMR000 / PAHCMC000

8.1.1 Function Setting Table of Dip Switch (Communication Module)

The default setting of all dip switch is set "off"

<Communication Module>

◆ Table of SW1~SW3

S/W name	No	Item		Setting	Note
	1	ODU Type	ON	Single Comm.	Using Single Split outdoor unit
	Obo type		OFF	MULTI V Comm.	Using MULTI V outdoor unit
		Control Type	ON	Communication	Controlled by DDC Modbus RTU or LG remote controllers & central controllers
	2	Control Type	OFF	Contact signal	Controlled by DDC through Contact signal LG Centralized controller can only monitor status
SW1	3	DO Type	ON	Fan Speed	DO1 : High, DO2 : Middle DO3 : Low DO changes accroding to fan speed setting value
			OFF	Status	DO1 : On/Off, DO2 : Defrost, DO3 : Alarm
	4	Fan Speed	ON	Fixed	The fan will always be running as set fan speed except defrost. During defrost, the fan speed will change as low fan speed.
	4	(available when SW1-3 'On')	OFF	Change	The fan speed will be changed according to TH on/off For more detail please check 'Digital Output - Fan Speed'
	Room thermistor sensor reference		ON	Remote control / Indoor unit / 2TH	Control according to value of remote control installer setting no.4 (refer to the remote control manual)
		setting	OFF	Indoor unit	-
	2	Reserved	-	-	-
SW2		/4 UI Setting	OFF/OF F	UI Setting #1	UI1 : Operation On/Off, UI2 : Heating/Cooling UI3 : Forced Thermo On/Off, UI4 : Target air temperature
OWZ	3/4		OFF/ON	UI Setting #2	UI1 : Operation On/Off, UI2 : Cooling only/Off UI3 : Heating only/Off, UI4 : Forced Thermo On and Off
	3/4	Of Setting	ON/OFF	Reserved	-
			ON/ON	UI Setting #4 3)	UI1 : Operation On/Off UI2 : Heating/Cooling UI3 : Emergency stop
		Croup Moster/Clave	ON	Slave mode	Please see "9.3 Multiple module installation guide" for more detail
	1	Group Master/Slave (Return Air only)	OFF	Master mode	Master mode is default for single AHU Controller installation. Please see "9.3 Multiple module installation guide" for more detail
SW3			OFF/OF F	Heat Pump	Cooling or Heating operation mode is available
35	2/3	Operation mode	OFF/ON	Heating Only	Operation mode is Heating only (Heating / Fan)
		setting	ON/OFF	Cooling Only	Operation mode is Cooling only (Cooling / Fan)
			ON/ON	Reserved	-
	4	Reserved	-	-	-
SW4	1~4	Capacity Index Setting	-	-	According to ODU Type, you can setup the capacity index of MULTI V or Single Split

- 1) Do not change the reserved switch(It may malfunction).
- 2) To use the group control, length of group control cable is max 50 $\mbox{m}.$
- 3) 'UI setting #4' is available when 'Dip SW1-2', 'Dip SW2-3', and ' Dip SW2-4' are ON.

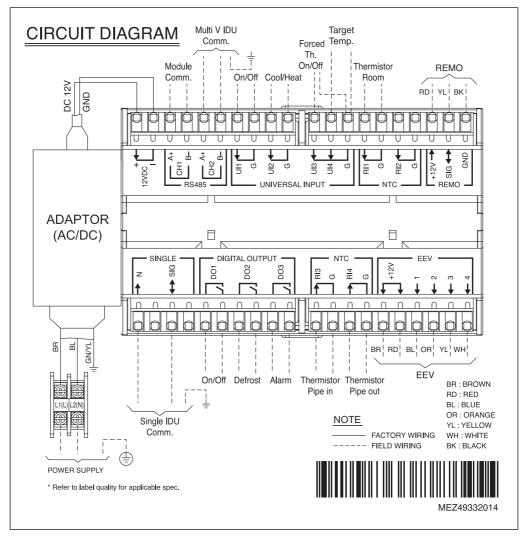

♦ Table of SW4

No	SW4				Capacity	/ [kBtu/h]	Сарас	ity [kW]
NO	Dip 1	Dip 2	Dip 3	Dip 4	MULTI V	SINGLE	MULTI V	SINGLE
1	OFF	OFF	OFF	OFF	12.0	5.0	3.5	1.5
2	OFF	OFF	OFF	ON	15.0	7.0	4.5	2.1
3	OFF	OFF	ON	OFF	18.0	9.0	5.6	2.5
4	OFF	OFF	ON	ON	24.0	12.0	7.1	3.5
5	OFF	ON	OFF	OFF	28.0	15.0	8.2	4.2
6	OFF	ON	OFF	ON	36.0	18.0	10.6	5.0
7	OFF	ON	ON	OFF	42.0	24.0	12.3	7.1
8	OFF	ON	ON	ON	48.0	30.0	14.1	8.0
9	ON	OFF	OFF	OFF	54.0	36.0	15.8	10.0
10	ON	OFF	OFF	ON	76.0	42.0	22.4	12.5
11	ON	OFF	ON	OFF	96.0	48.0	28.0	14.0
12	ON	OFF	ON	ON	115.0	60.0	33.6	15.0
13	ON	ON	OFF	OFF	134.0	70.0	39.2	19.0
14	ON	ON	OFF	ON	153.0	85.0	44.8	23.0
15	ON	ON	ON	OFF	172.0	Reserved	50.4	Reserved
16	ON	ON	ON	ON	192.0	Reserved	56.0	Reserved

¹⁾ If you want to connect the PRLK396A0/PRLK594A0 (EEV kit) with MULTI V outdoor unit, you have to set ON the Dip S/W 1, 2, 3 and 4 (Set the capacity as 192 kBtu/h).

²⁾ PAHCMR000 model can only be connected to PRLK048A0/PRLK096A0/PRLK396A0 EEV kit.

8.1.2 Circuit Diagram (Communication Module)

 The UI1, UI2, UI3 and UI4 ports / DO1, DO2, and DO3 ports have different functions for DIP switch settings, please refer to DIP switch settings.

◆ RS485/SINGLE Communication port

Name	Port	Contents	Electrical Spec.	Function
Module Comm.	RS485 CH1	DDC(Modbus) Comm.	Max. 500 m, 2C x (1.0~1.5) mm² (shield wire)	Communication with DDC or Main module of PAHCMS000 model through Modbus protocol
MULTI V IDU Comm.	RS485 CH2	MULTI V IDU Comm. (IDU A/B)	Max 1 km 2C x (1.0~1.5) mm² (shield wire)	Communication with MULTI V Outdoor unit
Single IDU Comm.	SINGLE N/SIG	Single IDU Comm. (IDU 2(N)/3)	Max 75 m 2C x (1.0~1.5) mm² (shield wire)	Communication with Single Split Outdoor unit

NTC Thermistor

Name	Port	Contents	Electrical Spec.	Function
Thermistor Room	NTC RI1/G	Room (Return) air thermistor	NTC 10 kΩ, 5 m	Return air temperature sensor
Thermistor Pipe in	NTC RI3/G	Pipe in (Liquid) thermistor	NTC 5 kΩ, 5 m	Inlet pipe (Liquid) Temp. sensor
Thermistor Pipe out	NTC RI4/G	Pipe out (Gas) thermistor	NTC 5 kΩ, 5 m	Outlet pipe (Gas) Temp. sensor

■ Universal Input – UI Setting #1

: Dip SW 1-2 is OFF + Dip SW 2-3 is OFF + Dip SW 2-4 is OFF

Note: Dip SW 1-2 is for contact signal control

<Communication Module>

Note

These functions are operated when UI input state(On↔Off) is changed.

■ Digital Output - Status

: Dip SW 1-3 is OFF

Name Port		Value		Electrical	Function	
Name	Port	Short	Open	Spec.	Function	
On / Off	DO1	On	Off		Operation On/Off Control	
Defrost	DO2	Defrost	Normal	250 V AC / 1 A 30 V DC / 1A	ODU Defrost Status(Only total defrost mode)	
Alarm	DO3	Error	Normal	00 1 20 7	Error output status	

■ Digital Output - Fan Speed (Fixed)

: Dip SW 1-3 is ON + Dip SW 1-4 is ON

<Communication Module>

Name	Port	Va	lue	Electrical	Function	
Name	Port	Short	Open	Spec.		
Fan_High	DO1	High		0503/40/44	The fan will always be running as set fan speed except	
Fan_Mid	DO2	Mid	Operation Off	250 V AC / 1 A 30 V DC / 1A	defrost. During defrost, the fan speed will change as low	
Fan_Low	DO3	Low			fan speed.	

■ Digital Output – Fan Speed (Change)

: Dip SW 1-3 is ON + Dip SW 1-4 is OFF

<Communication Module>

◆ Cooling or Heating - TH ON

Name	Port	Va	lue	Electrical	Function	
Name	Port	Short	Open	Spec.	FullCtion	
Fan_High	DO1	High		0503/40/44		
Fan_Mid	DO2	Mid	-		DO ports output fan speed signal according to setting value.	
Fan_Low	DO3	Low				

◆ Cooling or Heating - TH OFF

Name	Port	Value		Electrical	Function	
Name	Port	Short	Open	Spec.	Function	
Fan_High	DO1	-	TH Off	0=0.44.044.4		
Fan_Mid	DO2	-	TH Off	250 V AC / 1 A	DO 1,2 is 'Open', DO 3(Low) is 'short'	
Fan_Low	DO3	TH Off	-	00 1 20 7 111		

♦ Heating - TH OFF or Defrost

Name	Port	Value		Electrical	Function
Name	Port	Short	Open	Spec.	FullCuoii
Fan_High	DO1	-	TH Off		1) During defrost, All DOs are 'Open'
Fan Mid	DO2	-	TH Off	1	2) The fan speed will be changed according to TH on/off
Fan_Low	DO3	-	TH Off	250 V AC / 1 A 30 V DC / 1A	In cooling mode, - The fan speed will be running as low fan during TH off - The fan speed will be running as set fan speed during TH on In heating mode, - The fan speed will be stopped during TH off temperature setting - The fan will be running for 20s during TH OFF - The fan speed will be running as set fan speed during TH on with pipe temp.

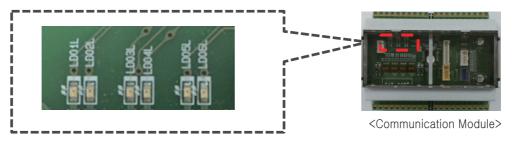

■ Remote Controller

Name	Port	ltem	Electrical Spec.	Function
REMO	+12 V/SIG/GND	Wire Remote Controller	Max 50 m	Communication with Wired Remote Controller

EEV

Name	Port Item		Electrical Spec.	Function
EEV	12 V DC/1/2/3/4	EEV Control	Max 5 m	EEV Control

■ LED Dsplay

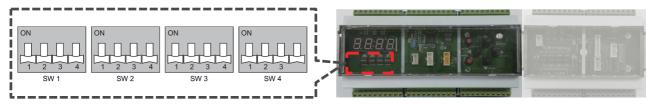

Name	Port	Function		
LD01L	LED1	Modbus Comm. Tx		
LD02L	LED2	Modbus Comm. Rx		
LD03L	LED3	Inner Comm. Tx		
LD04L	LED4	Inner Comm. Rx		
LD05L	LED5	ODU Comm. (Repeat On/Off when communicating with ODU)		
LD06L	LED6	Error Status (Repeat On/Off when error occurs)		

8.2 Discharge Air Temperature Control

PAHCMS000 / PAHCMM000+PAHCMC000

8.2.1 Function Setting Table of Dip Switch (Main Module)

The default setting of all dip switch is set "off"

<Main Module>

<Communication Module>

◆ Table of SW1~SW4

S/W	No	Item		Setting	Note
name					
		O a material Towns	On	Communication	Controlled by DDC through Modbus or LG Wired Remote Controller
	1	Control Type	Off	Contact signal	Controlled by DDC through Contact signal LG Centralized controller can only monitor status
		Discharge Temp.	On	Stand alone	LG remote controllers or DDC(Modbus) can control discharge air temperature by using LG discharge temperature sensor
	2	Control Type	Off	Manual by DDC	DDC(Contact Signal or Modbus) can control discharge air temperature by ODU capacity control reffering to field supplied discharge temperature
SW1	3	Defrost Operation	On	Normal	In case of multiple outdoor units, Defrost operation can be operated simultaneously
	3	Type ¹⁾	Off	Sequential Start up	In case of multiple outdoor units, the outdoor unit is sequentially started at intervals of 10 minutes
		LG Central Communication	ON	Monitoring/Control	Modbus communication between main module and LG central controller
	4	Type (CH3 of Main Module)	Off	Monitoring only	LGAP AHU communication between main module and LG central controller (monitoring only)
		ODU Capacity	On	ODU Capacity Setting #2	ODU capacity control #2
	1	Control	Off	ODU Capacity Setting #1	ODU capacity control #1
SW2	2	ODU Capacity % Control ³⁾	On	ODU Capacity Setting #3	ODU Capacity Control #3 (Priority is higher than SW2-1) & Enable the function for prevent defrosting at the same time
		& Prevent Derosting	Off	-	According to SW2-1 setting
	3	Reserved	-	-	-
	4	Reserved	-	-	-
	1	Reserved	-	-	-
SW3	2	Reserved	-	-	-
5003	3	Reserved	-	-	-
	4	Reserved	-	-	-
	1	E	On	Setting #2	System stops when the circuit(DI3-GND) is 'open'
SW4	'	Emergency Stop ²⁾	Off	Setting #1	System stops when the circuit(DI3-GND) is 'short'
3004	3	Reserved	-		-
	4	Reserved	-	-	-

- 1) Function of defrost operation type can be applied only to Multi V outdoor units(after MULTI V 5 model).
- 2) Emergency Stop fuction is working regardness 'Control Type' setting (Dip Switch SW 1-1)
- 3) Function of ODU capacity control(capacity % control) can be applied only to Multi V outdoor units(after MULTI V 5 model) and please check the below.
 - Check the software version: Main PCB version of MULTI V 5 model is after version 1.43.0 and main module's version of AHUcomm. kit is after version 1.3.
 - Set the function: MULTI V 5 model should be set function FN39 option1 or option2. (Dip SW NO.5: ON → Set to 'FUNC' → Set to 'FN39': Option 1 or Option 2) Please see the Multi V manual for more detail how to set this function.
 - In case of using the ODU capacity control(capacity % control), SW2-1(ODU Capacity control #1, #2) setting is ignored.

8.2.2 Function Setting Table of Dip Switch (Communication Module)

The default setting of all dip switch is set "off"

<Communication Module>

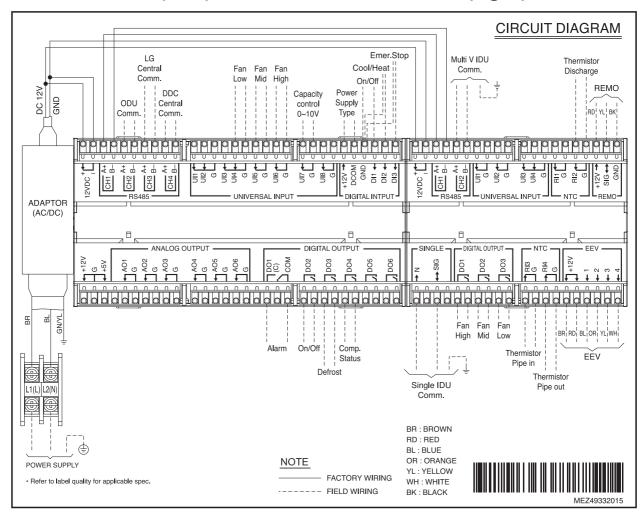

◆ Table of SW1~SW3

S/W name	No	Item	Setting		Note
	1	ODII Turo	ON	Single Comm.	Using Single Split outdoor unit
	'	ODU Type	OFF	MULTI V Comm.	Using MULTI V outdoor unit
	2	Control Type	ON	Communication	Module Communication (it must me 'On', when Comm module is connected with Main Module, even if DDC controls Main Module by contract signal)
SW1			OFF	Contact signal	Not used
	3	DO Type	ON	Fan Speed	Not used
	3	оо туре	OFF	Status	Not used
	4	Fan Speed (TH.	ON	Fixed	Not used
	4	On/Off)	OFF	Change	Not used
	1	Reserved	-	•	-
	2	Reserved	-	•	-
SW2			OFF/OF F	UI Setting #1	Not used
	3/4	UI Setting	OFF/ON	UI Setting #2	Not used
			ON/OFF	•	-
			ON/ON	•	-
	1	Master/Slave	ON	Slave mode	Not used
	'	iviasiei/Siave	OFF	Master mode	Master is default
014/0			OFF/OF F	Heat Pump	Cooling or Heating operation mode is available
SW3	2/3	Operation mode setting	OFF/ON	Heating Only	Operation mode is Heating only (Heating / Ventilation)
		setting	ON/OFF	Cooling Only	Operation mode is Cooling only (Cooling / Ventilation)
			ON/ON	Reserved	-
	4	Reserved	-	•	-
SW4	1~4	Capacity Index Setting	-	-	According to ODU Type, you can setup the capacity index of MULTI V or Single Split Please refer to 'Table of SW4' in Return Air Temperature Control (PAHCMR000)

¹⁾ Do not change the reserved switch(It may malfunction).

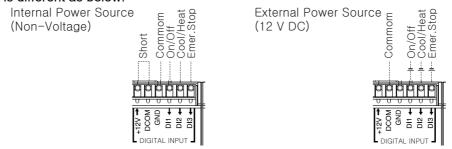

8.2.3 Circuit Diagram

Main Module(Left)+Communication Module(right)

A CAUTION

Please check the electrical specification of digital output (DO) of DDC whether 12 V DC or Non-voltage for 'DI Control'. According to the power source of DDC's DO(Digital Output), wirings method of DI(Digital Input) in AHU communication kit is different as below.

For detail wiring, please see "Digital Input - Internal power source", and Digital Input - External Power Source (12 V DC)" in this PDB

[Function Setting of Main Module]

♦ RS485 Communication port

Name	Port	Contents	Electrical Spec.	Function
ODU Comm.	RS485 CH2	MULTI V : ODU Comm. (Cen A/B or INT A/B) Single : PI485 Gateway (BUS A/B)	Max 1km, 2C x (1.0~1.5) mm ² (shield wire)	Communication with MULTI V/Single split ODU for ODU Capacity control
LG Central Comm.	RS485 CH3	LG Central Comm.	Max 500 m, 2C x (1.0~1.5) mm ² (shield wire)	Communication with LG centralized controller through LGAP AHU Protocal
DDC Central Comm.	RS485 CH4	DDC(Modbus) Central Comm.	Max 500 m, 2C x (1.0~1.5) mm ² (shield wire)	Communication with DDC centralized controller through Modbus protocol

Note

Single PI485 Gateway (PMNFP14A1) is sold separately

Universal Input

· Digital Input

Name Port		Va	lue	Electrical	Function
Name	FUIL	Short	Open	Spec.	Function
Fan_High	UI4	Low	STOP	Non Voltage	
Fan_Mid	UI5	Mid	STOP	Non Voltage	Fan Speed Setting Input
Fan_Low	UI6	High	STOP	Non Voltage	

Note

UI is available when DIP SW1-1 is Off

Analog Input

Name	Port	Value	Electrical Spec.	Function
Capacity Control0 ~ 10 V	UI7 (AI)	0 ~ 10 V Input	DC 0 ~ 10 V,20 mA	ODU Capacity control input (0 ~ 10V) * When Temp. Control Type is 'Manual by DDC'(SW 1-2 : Off), below UI7 Table setting is available

Note

Please refer to the 'UI7(Analog Input) - ODU Capacity Control' of this PDB

Digital Input - Internal Power Source (Non-voltage)

Name	Port	Value		Electrical	Function
Name	Fort	Short	Open	Spec.	1 diletion
On/Off	DI1 - GND	On	Off	Non voltage	Operation On/Off
Cool/Heat	DI2 - GND	Heating	Cooling	Non voltage	Operation Mode
Emer. Stop	DI3 - GND	Emergency Stop	Normal	Non voltage	Emergency Stop Input (Priority operation)
DI Control	+12 V -DCOM	Internal Power Source	External Power Source	Non voltage	Use internal power source for DI +12 V-DCOM should be "Short"

Note

DI1, DI2 are available when DIP SW 1-1 is Off.

DI3(Emergency Stop function) is available regardless of 'Control Type' setting.

Digital Input - Internal Power Source (12 V DC)

Name	Port	Value		Electrical	Function	
Name	Fort	Short Open		Spec.	FullCuon	
On/Off	DI1 - DCOM	On	Off	12 V DC 10 mA	Operation On/Off	
Cool/Heat	DI2 - DCOM	Heating	Cooling	12 V DC 10 mA	Operation Mode	
Emer. Stop	DI3 - DCOM	Emergency Stop	Normal	12 V DC 10 mA	Emergency Stop Input (Priority operation)	
DI Control	+12 V -DCOM	Internal Power Source	External Power Source	Non voltage	Use internal power source for DI +12 V-DCOM should be "Open"	

Note

DI1, DI2 are available when DIP SW 1-1 is Off.

Please check the electrical specification of digital output (DO) of DDC controller whether 12 V DC or non-voltage for 'DI Control'.

According to the electrical spec. of DO of DDC controller, 'DI Control' should be set. If the wrong setting is made, DI does not work properly.

■ Digital Output (Relay C contact)

Name	Port	Value	Electrical Spec.	Function
Alarm	DO1	- Normal Status A B COM - Error Status A B COM	30 V DC / 1 A250 V AC / 1 A	Output normal or error status (Relay C Contact) - A Contact Normal status : open / Error status : short - B Contact Normal status : short / Error status : open

9.5	90	830	2827	
10.0	100	804	2990	

Note

- 1): This target pressure is default value of ODU. Target pressure is depend on the ODU target pressure setting Fn8.
- Please refer to ODU's manual for more information about how to set the target pressure.
- ODU Capacity ratios mentioned in the table above are not exact.
- 'Evaporative temperature / Condenser temperature' may vary depending on system operation frequency, pressure option setting and piping installation conditions.
- Single Split ODU is only supporting <1 System> table.

◆ 2 System or more

Voltage (V)	Total Capacity ratio [%]			Each ODU's capacity ratio [%]			
• , ,	2 System	3 System	4 System	ODU Master#1	ODU Master#2	ODU Master#3	ODU Master#4
0.0	0	0.0	0.0	Operation Off	Operation Off	Operation Off	Operation Off
2.0	20	26.7	20.0	40	0	40	0
2.5	25	30.0	22.5	50	0	50	0
3.0	30	33.3	25.0	60	0	60	0
3.5	35	36.7	27.5	70	0	70	0
4.0	40	40.0	40.0	40	40	40	40
4.5	45	46.7	47.5	40	50	40	50
5.0	50	50.0	50.0	50	50	50	50
5.5	55	56.7	57.5	50	60	50	60
6.0	60	60.0	60.0	60	60	60	60
6.5	65	66.7	67.5	60	70	60	70
7.0	70	70.0	70.0	70	70	70	70
7.5	75	76.7	77.5	70	80	70	80
8.0	80	80.0	80.0	80	80	80	80
8.5	85	86.7	87.5	80	90	80	90
9.0	90	90.0	90.0	90	90	90	90
9.5	95	96.7	97.5	90	100	90	100
10.0	100	100.0	100.0	100	100	100	100

The actual temperature at the evaporator may vary by pressure drop. Please contact a local sale person to design an AHU heat exchanger.

■ UI7(Analog Input) – ODU Capacity Control #2

: Dip SW 2-1 is ON

1 System

Voltage (V)	ODU Capacity Range (%)	Target Pressure ¹⁾ (kPa)		
voitage (v)	Obo Capacity Range (78)	Cooling Mode	Heating Mode	
0.0	Operation Off	-	-	
1.0	100	804	2990	
2.0	90	830	2827	
3.0	80	856	2663	
4.0	70	882	2500	
5.0	60	922	2337	
6.0	50	974	2173	
7.0	45	1000	2108	
8.0	40	1039	2010	
9.0	Operation Off	-	-	
10.0	Operation Off	-	-	

Note

- 1): This target pressure is default value of ODU. Target pressure is depend on the ODU target pressure setting Fn8.
- Please refer to ODU's manual for more information about how to set the target pressure.
- 'Evaporative temperature / Condenser temperature' may vary depending on system operation frequency, pressure option setting and piping installation conditions.

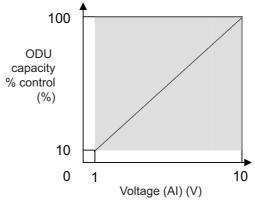

The actual temperature at the evaporator may vary by pressure drop. Please contact a local sale person to design an AHU heat exchanger.

■ UI7(Analog Input) – ODU Capacity Control #3

: Dip SW 2-2 is ON

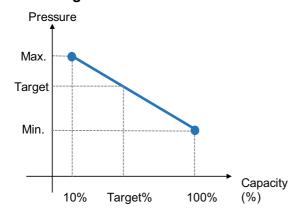

ODU capacity range (%) is from 10% to 100%, the controllable range is 5%, and It can change % according to analog input voltage(V). Ex) 1 V = 10%, 3.5 V = 35%, 7.5 V = 75%

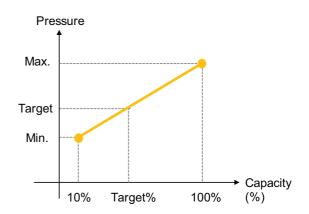

<ODU Capacity control range(%)>

- Evaporative temperature and Condensing temperature may vary depending on system operation conditions and piping installation conditions.
- 2) Function of ODU capacity control(capacity % control) can be applied only to Multi V outdoor units(after MULTI V 5 model) and please check the below.
 - Check the software version: Main PCB version of MULTIV 5 model is after version 1.43.0 and main module's version of AHU comm. kit is after version 1.3.
 - Set the function: MULTI V 5 model should be set function FN39 option1 or option2.
 (DIP SW NO.5: ON → Set to 'FUNC' → Set to 'FN39': Option 1 or Option 2)
 - Please see the Multi V manual for more detail how to set this function.

◆ ODU Target Pressure

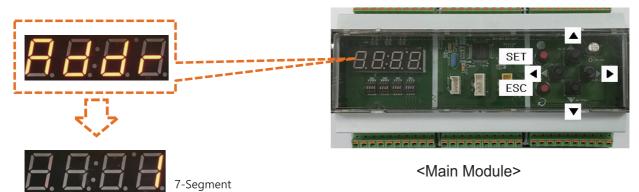

<ODU target pressure range at heating mode>

Voltage (V)	ODU Capacity Range (%)	Target Pressure ¹⁾ (kPa)		
	Obo Capacity Range (%)	Cooling Mode	Heating Mode	
10.0	100	804	2990	
9.5	95	830	2958	
9.0	90	856	2925	
8.5	85	882	2859	
8.0	80	908	2827	
7.5	75	935	2794	
7.0	70	948	2761	
6.5	65	974	2696	
6.0	60	1000	2663	
5.5	55	1026	2631	
5.0	50	1052	2598	
4.5	45	1078	2565	
4.0	40	1105	2500	
3.5	35	1131	2467	
3.0	30	1157	2435	
2.5	25	1183	2402	
2.0	20	1209	2337	
1.5	15	1235	2304	
1.0	10	1261	2271	

- 1) These target pressures are based on Multi V ODU default setting value. It can change using Multi V ODU function.
- Cooling/Heating min. ~ max. pressure rages are changed by Multi V ODU function Fn39.
- 2) Evaporative temperature and Condensing temperature may vary depending on system operation conditions and piping installation conditions.
- 3) Function of ODU capacity control(capacity % control) can be applied only to Multi V outdoor units(after MULTI V 5 model) and please check the below.
 - Check the software version: Main PCB version of MULTI V 5 model is after version 1.43.0 and main module's version of AHU comm. kit is after version 1.3.
 - Set the function: MULTI V 5 model should be set function FN39 option1 or option2.
 (DIP SW NO.5: ON → Set to 'FUNC' → Set to 'FN39': Option 1 or Option 2)
 - Please see the Multi V manual for more detail how to set this function.

■ Main Module Address Setting

An address for the main module is needed when PAHCMS000 is connected to LG central controller or DDC by Modbus. The address of main module can be set within '1~247 in decimal number'. In this case, the address of the main module should be the same as the Modbus address in LG central controller or DDC.

♦ Setting Method

- Press 'Set' button(red)
- Select 'Addr' in 7- Segment using ▲▼button and then press 'Set' button
- Press 'ESC' button to exit

A CAUTION

Note that LG central controller are using hexadecimal number. Please check the address of main module is matching to the address of LG central controller or DDC when using Modbus protocol.

Otherwise, PAHCMS000 will not operate properly.

- ex) The address of main module '13' (decimal number)
 - 'The address of LG central controller should be '0D' (Hexadecimal number)

[Function Setting of Communication Module]

♦ RS485/SINGLE Communication port

Name	Port	Contents	Electrical Spec.	Function
MULTI V IDU Comm.	RS485 CH2	MULTI V IDU Comm. (IDU A/B)	Max 1 km 2C x (1.0~1.5) mm² (shield wire)	Communication with MULTI V Outdoor unit
Single IDU Comm.	SINGLE N/SIG	Single IDU Comm. (IDU 2(N)/3)	Max 75 m 2C x (1.0~1.5) mm² (shield wire)	Communication with Single Split Outdoor unit

♦ NTC Thermistor

Name	Port	Contents	Electrical Spec.	Function
Thermistor Discharge	NTC RI2/G	Discharge air thermistor	NTC 10 kΩ, 5 m	Discharge Air temperature sensor
Thermistor Pipe in	NTC RI3/G	Pipe in (Liquid) thermistor	NTC 5 kΩ, 5 m	Inlet pipe (Liquid) Temp. sensor
Thermistor Pipe out	NTC RI4/G	Pipe out (Gas) thermistor	NTC 5 kΩ, 5 m	Outlet pipe (Gas) Temp. sensor

■ Remote Controller

ı	Name	Port	Item	Electrical Spec.	Function
F	REMO	+12 V/SIG/GND	Wire Remote Controller	Max 50 m	Communication with Wired Remote Controller

EEV

Name	Port	ltem	Electrical Spec.	Function
EEV	12 V DC/1/2/3/4	EEV Control	Max 5 m	EEV Control

Note

When a communication module (or PAHCMR000) is connected to the main module of PAHCMS000, DO and UI in communication module are not used.

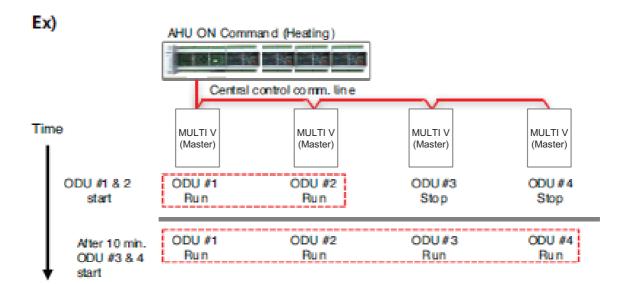

8.2.4 Defrost Operation

It is a function to prevent outdoor units from simultaneously entering defrost when two or more outdoor units are linked. The defrost operation function is only applied to the MULTI V outdoor unit(after MULTI V 5).

■ Sequential Start Up control of outdoor unit

- Operating condition : Power on → Heating operation command
- Stop condition: Power off or stop command
- · Function operation
 - This function is available when DIP switch is set to the Sequential Start Up.
 - In order to prevent the outdoor unit from entering the defrosting at the same time of heating operation, only half of the outdoor unit is in operation and the remaining outdoor units are operated after 10 minutes when the operation command is received. (Sequential Start up is not operated in case of cooling operation)
 - Sequence of start up operation

Number of Outdoor unit in 1 system	Initial start up	Start up after 10 min
2	1 ODUs	Another 1 ODU
3	2 ODUs	Another 1 ODU
4	2 ODUs	Another 2 ODUs

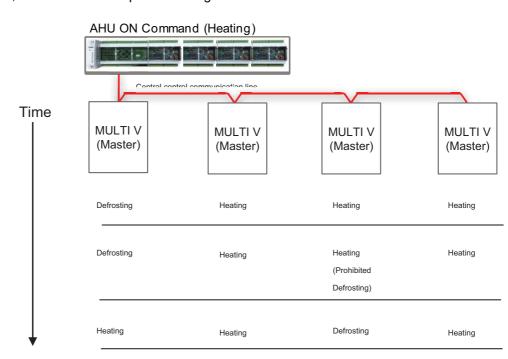

■ The function for prevent defrosting at the same time

- Operating condition : Power on → Heating operation command
- Stop condition : Power off or stop command
- · Function operation

Ex)

- Main module send the defrost prohibition signal to all ODUs connection with main module.
- If the main module receive the request of defrost from specific ODU unit, it send the defrost permission signal
 to specific ODU and send the defrost prohibition signal to other ODUs.
- If the main module receive the defrost completion signal from specific ODU or in case of the all ODUs are not defrost mode, it send the defrost prohibition signal to all ODUs.

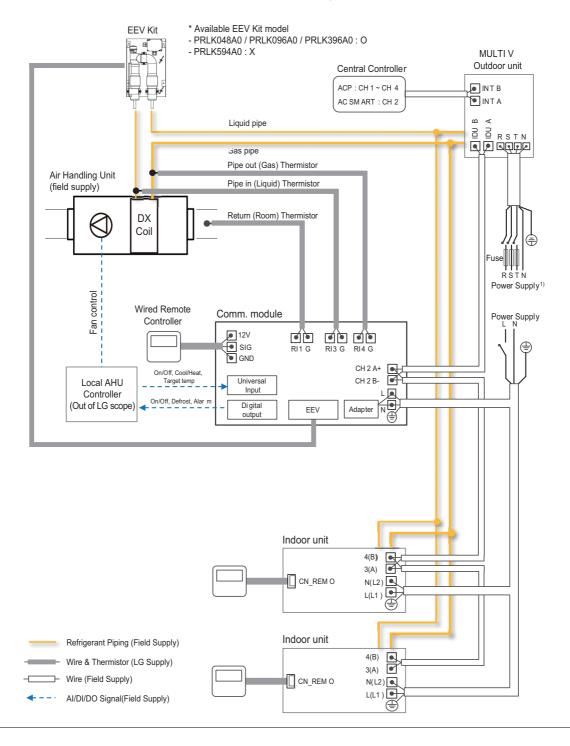

Note

This function can be applied only to Multi V outdoor units(after MULTI V 5 model) and please check the below.

- Check the software version: Main PCB version of MULTI V 5 model is after version 1.43.0 and main module's version of AHU comm. kit is after version 1.3.
- Set the function: MULTI V 5 model should be set SVC SE28(DIP SW NO.5: ON → Set to 'SVC' → Set to 'SE28': ON) Please see the Multi V manual for more detail how to set this function.
- Based on Outdoor Unit cycle, the maximum running defrost variable can be changed.
- Total number of units operating in defrosting may be changed by Multi V ODU cycle in each system to protect the system.

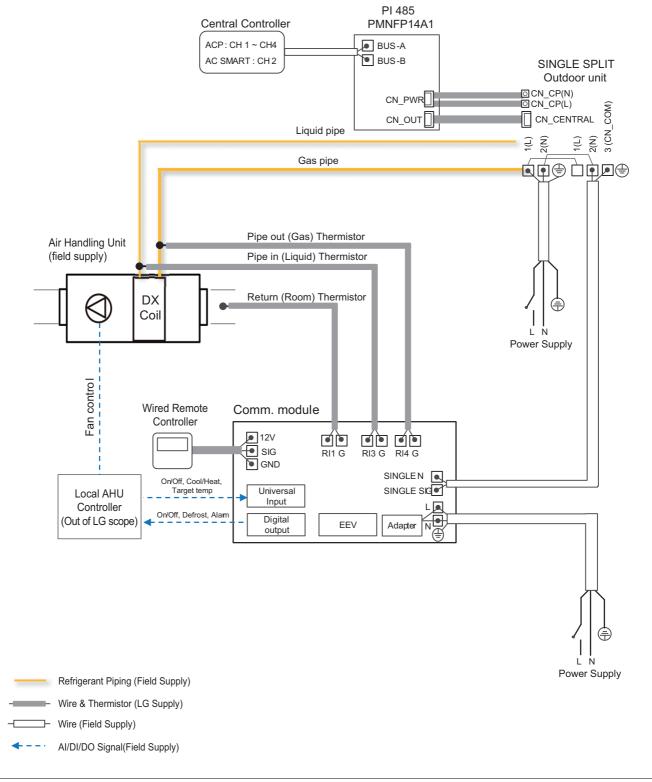

9.1 Return Air Temperature Control (PAHCMR000)

9.1.1 MULTI V + EEV Kit + DDC (Contact Signal)

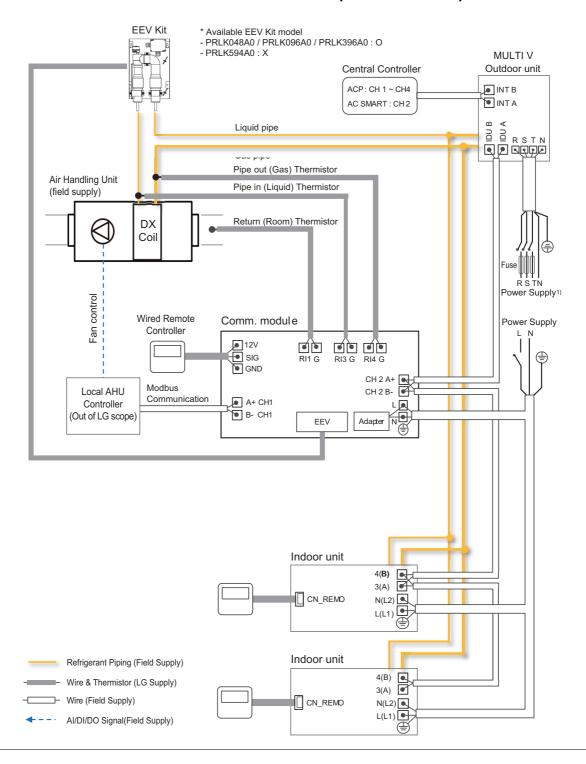

- 1) The type of power supply of outdoor unit can vary depending on the outdoor model.
- 2) Please make wiring between LG controller and outdoor unit with the same polarity.
- 3) LG controller can be optionally applied with DDC.

9.1.2 SINGLE SPLIT + DDC (Contact Signal)

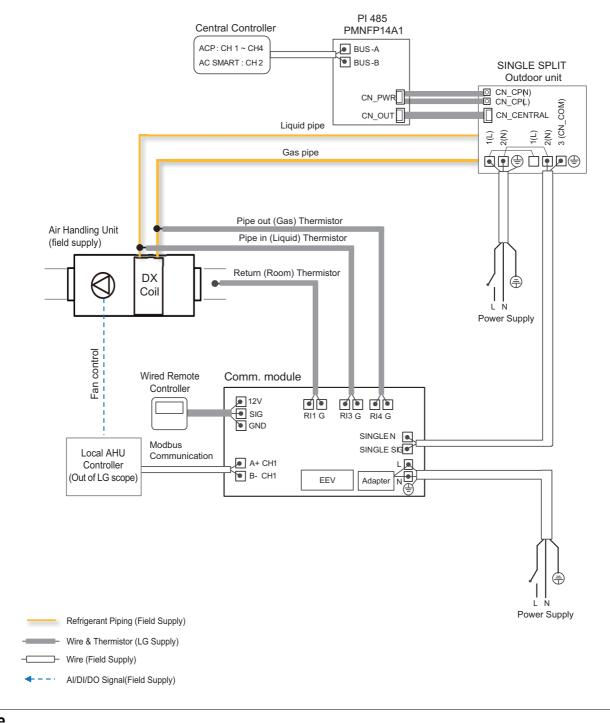

- 1) The type of power supply of outdoor unit can vary depending on the outdoor model.
- 2) Please make wiring between LG controller and outdoor unit with the same polarity.
- 3) LG controller can be optionally applied with DDC.

9.1.3 MULTI V + EEV Kit + LG Control/DDC (Modbus RTU)

- 1) The type of power supply of outdoor unit can vary depending on the outdoor model.
- 2) Please make wiring between LG controller and outdoor unit with the same polarity.
- 3) LG controller can be optionally applied with DDC.

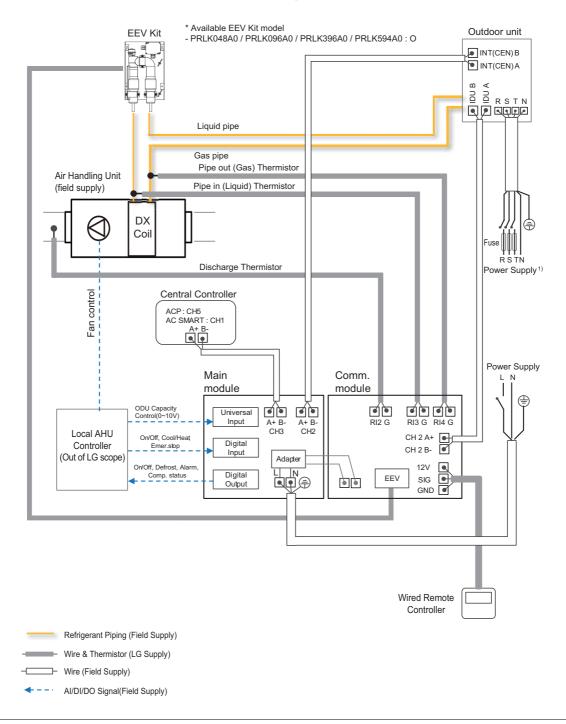

9.1.4 SINGLE SPLIT + LG Control/DDC (Modbus RTU)

- 1) The type of power supply of outdoor unit can vary depending on the outdoor model.
- 2) Please make wiring between LG controller and outdoor unit with the same polarity.
- 3) LG controller can be optionally applied with DDC.

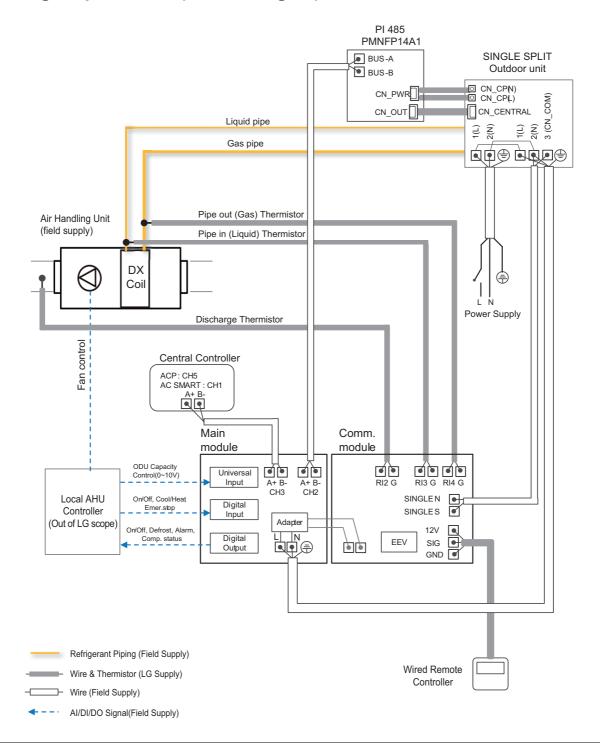

9.2 Discharge Air Temperature Control (PAHCMS000)

9.2.1 MULTI V + EEV + DDC (Contact signal)

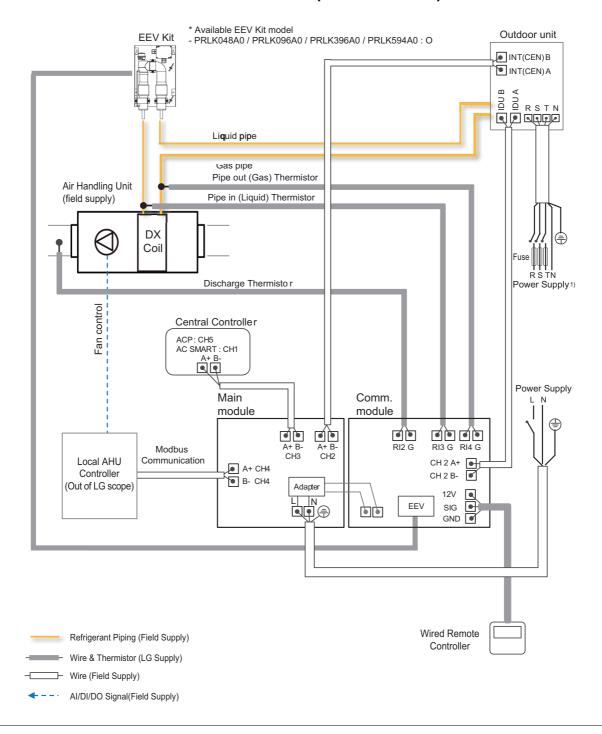

- 1) The type of power supply of outdoor unit can vary depending on the outdoor model.
- 2) Please make wiring between LG controller and outdoor unit with the same polarity.
- 3) LG controller can be optionally applied with DDC.

9.2.2 Single Split + DDC (Contact signal)

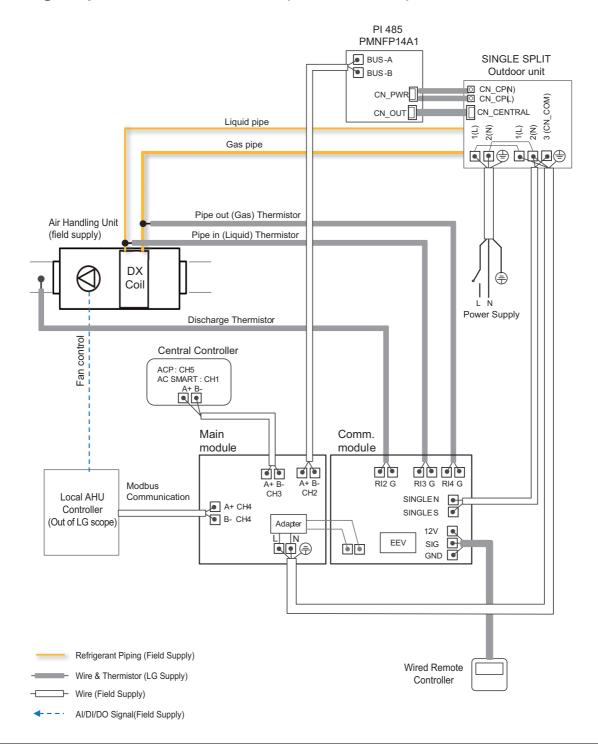

- 1) The type of power supply of outdoor unit can vary depending on the outdoor model.
- 2) Please make wiring between LG controller and outdoor unit with the same polarity.
- 3) LG controller can be optionally applied with DDC.

9.2.3 MULTI V + EEV + LG Control/DDC (Modbus RTU)

- 1) The type of power supply of outdoor unit can vary depending on the outdoor model.
- 2) Please make wiring between LG controller and outdoor unit with the same polarity.
- 3) LG controller can be optionally applied with DDC.

9.2.4 Single Split + LG Control/DDC (Modbus RTU)

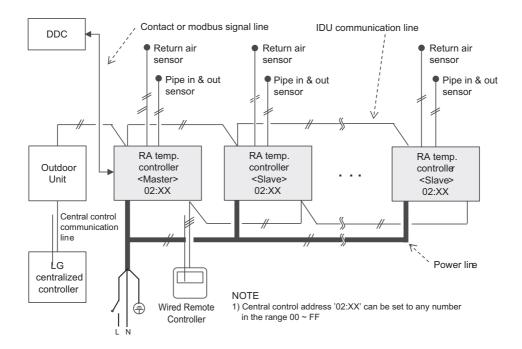

- 1) The type of power supply of outdoor unit can vary depending on the outdoor model.
- 2) Please make wiring between LG controller and outdoor unit with the same polarity.
- 3) LG controller can be optionally applied with DDC.

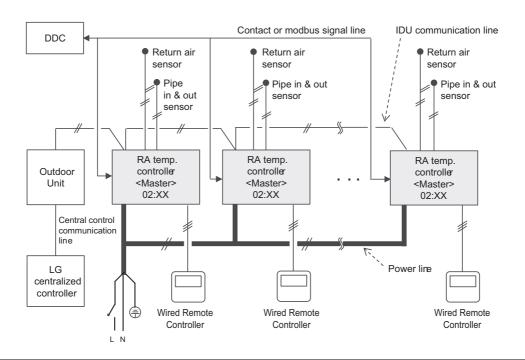

9.3 Multiple module installation guide

9.3.1 Return air temperature controller

■ Case 1 : One AHU

■ Case 2 : Multiple AHUs

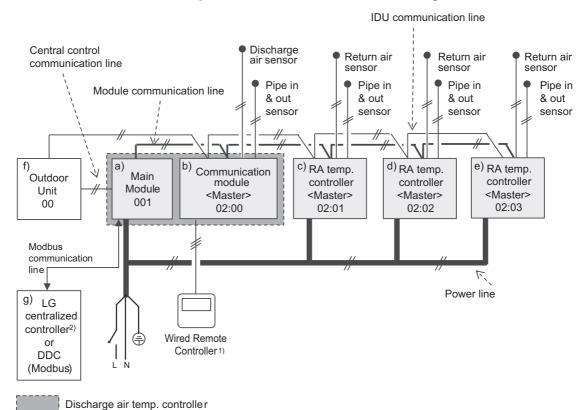

Note

Central control address '02:XX' can be set to any number in the range 00 ~ FF.

9.3.2 Discharge air temperature controller

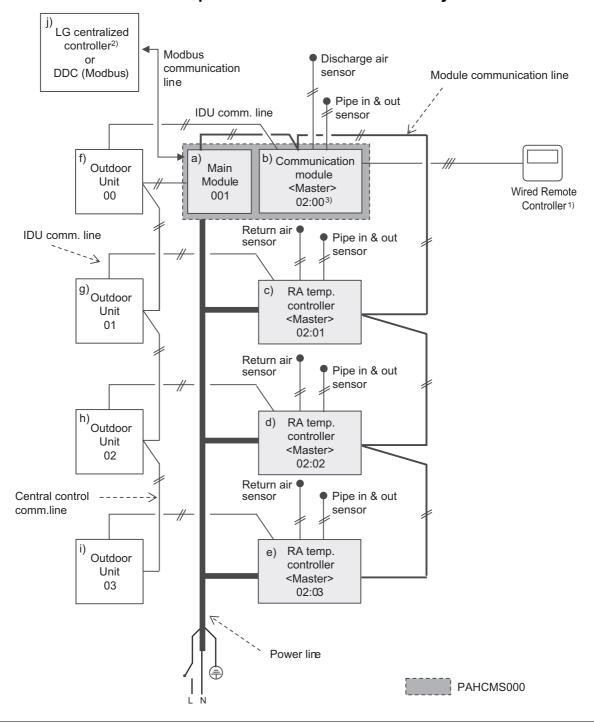

■ Case 1 : One AHU with Multiple coils / LG Control or DDC by Modbus

	Name	Address to set	Address input method	Note
a)	Main Module	1	by tact switch of Main module	For the Modbus communication - Please see "Main Module Address Setting"
b)	Communication Module	00 (Fixed)		
c)	RA temp. Controller #1	01 (Fixed)	by remote controller	Please go to "Address Setting" of Installer setting Function code 02
d)	RA temp. Controller #2	02 (Fixed)		
e)	RA temp. Controller #3	03 (Fixed)		
f)	Outdoor Unit	00 (Fixed)	by tact switch of outdoor unit.	The address of outdoor unit should be same as communication Module of PAHCMS000 - Please see "ODU installation manual"
g)	LG Central Controller	1	by central controller's installation function	It should be matched with Main module's address.

- 1) Remote controller should be connected to PAHCMS000 and remote controller connected to PAHCMR000 unit can only monitor status.
- 2) LG Central controller addressing for discharge air temp. controller should be set as the same address of the main module's address.
- 3) Address of Comm. module of PAHCMS000 (Central control address) must be set to '00'. The address for additional PAHCMR000 must be set with an order increasing by 1. Also ODU address must be the same as the paired AHU controller.
- 4) All PAHCMR000 units need to be set as Master mode.
- 5) Return air sensors connected RA temp. controller (PAHCMR000) do not need to installed at the duct. They work as dummy sensors.

■ Case 2 : One AHU with Multiple ODUs / LG Control or DDC by Modbus

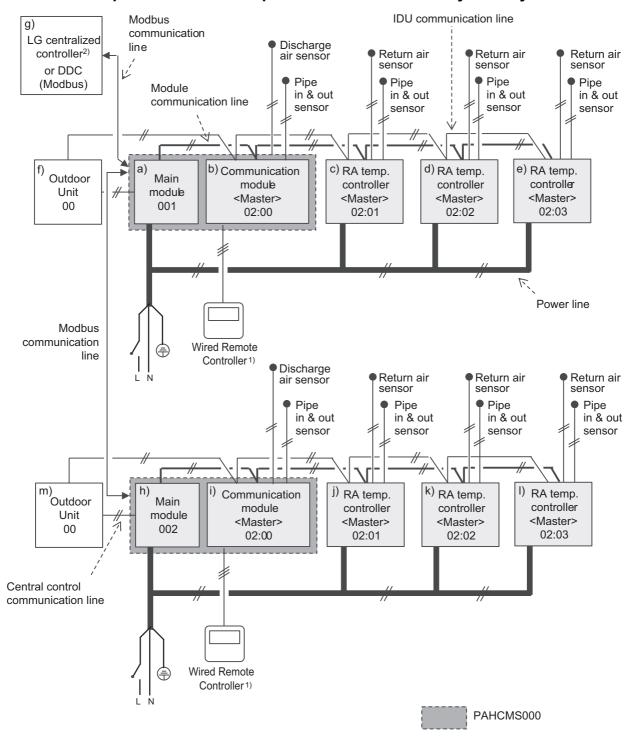

Note

This case is ONLY for MultiV product.

	Name	Address to set	Address input method	Note
a)	Main Module	1	by tact switch of Main module	For the Modbus communication - Please see "Main Module Address Setting"
b)	Communication Module	00 (Fixed)		
c)	RA temp. Controller #1	01 (Fixed)	by remote controller	Please go to "Address Setting" of Installer setting Function code 02
d)	RA temp. Controller #2	02 (Fixed)		
e)	RA temp. Controller #3	03 (Fixed)		
f)	Outdoor Unit #1	00 (Fixed)		
g)	Outdoor Unit #2	01 (Fixed)	by tact switch of outdoor unit	The address of outdoor unit should be same as communication Module of PAHCMS000
h)	Outdoor Unit #3	02 (Fixed)	by tact switch of outdoor unit.	- Please see "ODU installation manual"
i)	Outdoor Unit #4	03 (Fixed)		
j)	LG Central Controller Of DDC	1	by central controller's installation function	It should be matched with Main module's address.

- 1) Remote controller should be connected to PAHCMS000 and remote controller connected to PAHCMR000 unit can only monitor status.
- 2) LG Central controller addressing for discharge air temp. controller should be set as the same address of the main module's address.
- 3) Address of Comm. module of PAHCMS000 (Central control address) must be set to '00'. The address for additional PAHCMR000 must be set with an order increasing by 1. Also ODU address must be the same as the paired AHU controller.
- 4) All PAHCMR000 units need to be set as Master mode.
- 5) Return air sensors connected RA temp. controller (PAHCMR000) do not need to installed at the duct. They work as dummy sensors.

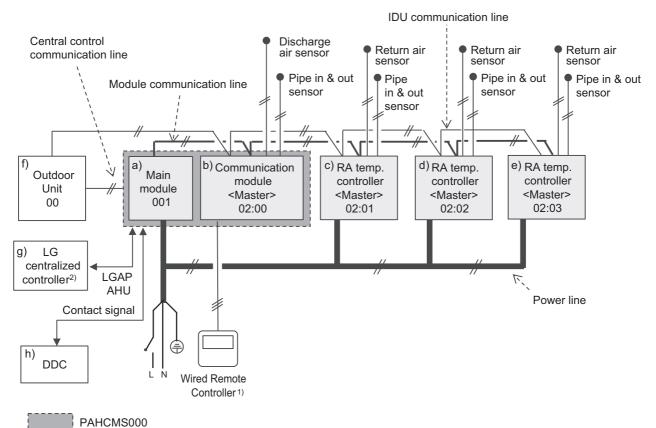

■ Case 3: Multitple AHUs with Multiple coils / LG Control or by DDC by Modbus

	Name	Address to set	Address input method	Note
a)	Main Module	1	by tact switch of Main module	For the Modbus communication - Please see "Main Module Address Setting"
b)	Communication Module	00 (Fixed)		
c)	RA temp. Controller #1	01 (Fixed)	by remote centreller	Please go to "Address Setting" of Installer setting.
d)	RA temp. Controller #2	02 (Fixed)		- Function code 02
e)	RA temp. Controller #3	03 (Fixed)		
f)	Outdoor Unit	00 (Fixed)	by tact switch of outdoor unit.	The address of outdoor unit should be same as communication Module of PAHCMS000 - Please see "ODU installation manual"
g)	LG Central Controller	01	by central controller's installation function	It should be matched with Main module's address.
h)	Main Module	2	by tact switch of Main module	For the Modbus communication - Please see "Main Module Address Setting"
i)	Communication Module	00 (Fixed)		
j)	RA temp. Controller #1	01 (Fixed)	hy remete centraller	Please go to "Address Setting" of Installer setting
k)	RA temp. Controller #2	02 (Fixed)	by remote controller	Function code 02
I)	RA temp. Controller #3	03 (Fixed)		
m)	Outdoor Unit	00 (Fixed)	by tact switch of outdoor unit.	The address of outdoor unit should be same as communication Module of PAHCMS000 - Please see "ODU installation manual"
g)	LG Central Controller	02	by central controller's installation function	It should be matched with Main module's address.

- 1) Remote controller should be connected to PAHCMS000 and remote controller connected to PAHCMR000 unit can only monitor status.
- 2) LG Central controller addressing for discharge air temp. controller should be set as the same address of the main module's address.
- 3) Address of Comm. module of PAHCMS000 (Central control address) must be set to '00'. The address for additional PAHCMR000 must be set with an order increasing by 1. Also ODU address must be the same as the paired AHU controller.
- 4) All PAHCMR000 units need to be set as Master mode.
- 5) Return air sensors connected RA temp. controller (PAHCMR000) do not need to installed at the duct. They work as dummy sensors.

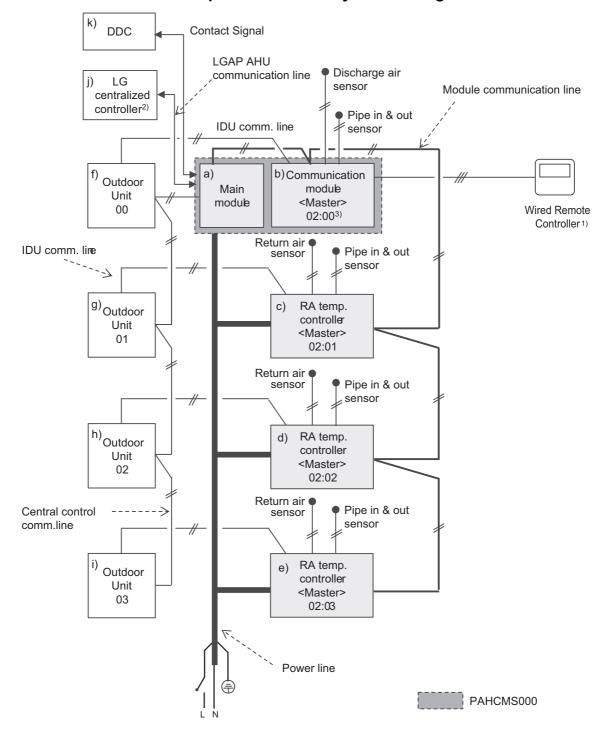

■ Case 4 : One AHU / DDC by Contact Signal

	Name	Address to set	Address input method	Note	
a)	Main Module	1	by tact switch of Main module	For the Modbus communication - Please see "Main Module Address Setting"	
b)	Communication Module	00 (Fixed)			
c)	RA temp. Controller #1	01 (Fixed)		Please go to "Address Setting" of Installer setting Function code 02	
d)	RA temp. Controller #2	02 (Fixed)			
e)	RA temp. Controller #3	03 (Fixed)			
f)	Outdoor Unit	00 (Fixed)	by tact switch of outdoor unit.	The address of outdoor unit should be same as communication Module of PAHCMS000 - Please see "ODU installation manual"	
g)	LG Central Controller	1	by central controller's installation function	It should be matched with Main module's address.	
h)	DDC	Don't care			

- 1) Remote controller should be connected to PAHCMS000 and remote controller connected to PAHCMR000 unit can only monitor status.
- 2) LG Central controller addressing for discharge air temp. controller should be set as the same address of the main module's address.
- 3) Address of Comm. module of PAHCMS000 (Central control address) must be set to '00'. The address for additional PAHCMR000 must be set with an order increasing by 1. Also ODU address must be the same as the paired AHU controller.
- 4) All PAHCMR000 units need to be set as Master mode.
- 5) Return air sensors connected RA temp. controller (PAHCMR000) do not need to installed at the duct. They work as dummy sensors.

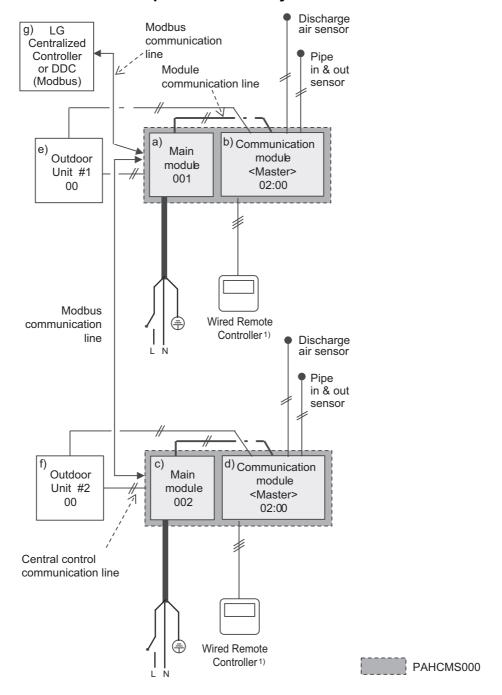

■ Case 5 : One AHU with Multiple ODUs / DDC by Contact Signal

	Name	Address to set	Address input method	Note	
a)	Main Module	1	by tact switch of Main module	For the Modbus communication - Please see "Main Module Address Setting"	
b)	Communication Module	00 (Fixed)			
c)	RA temp. Controller #1	01 (Fixed)		Please go to "Address Setting" of Installer setting.	
d)	RA temp. Controller #2	02 (Fixed)		- Function code 02	
e)	RA temp. Controller #3	03 (Fixed)			
f)	Outdoor Unit #1	00 (Fixed)		The address of outdoor unit should be same as communication Module of PAHCMS000	
g)	Outdoor Unit #2	01 (Fixed)	by tact switch of outdoor unit.		
h)	Outdoor Unit #3	02 (Fixed)	by tact switch of outdoor unit.	- Please see "ODU installation manual"	
i)	Outdoor Unit #4	03 (Fixed)			
j)	LG Central Controller	1	by central controller's installation function	It should be matched with Main module's address.	
h)	DDC	Don't care			

- 1) Remote controller should be connected to PAHCMS000 and remote controller connected to PAHCMR000 unit can only monitor status.
- 2) LG Central controller addressing for discharge air temp. controller should be set as the same address of the main module's address.
- 3) Address of Comm. module of PAHCMS000 (Central control address) must be set to '00'. The address for additional PAHCMR000 must be set with an order increasing by 1. Also ODU address must be the same as the paired AHU controller.
- 4) All PAHCMR000 units need to be set as Master mode.
- 5) Return air sensors connected RA temp. controller (PAHCMR000) do not need to installed at the duct. They work as dummy sensors.

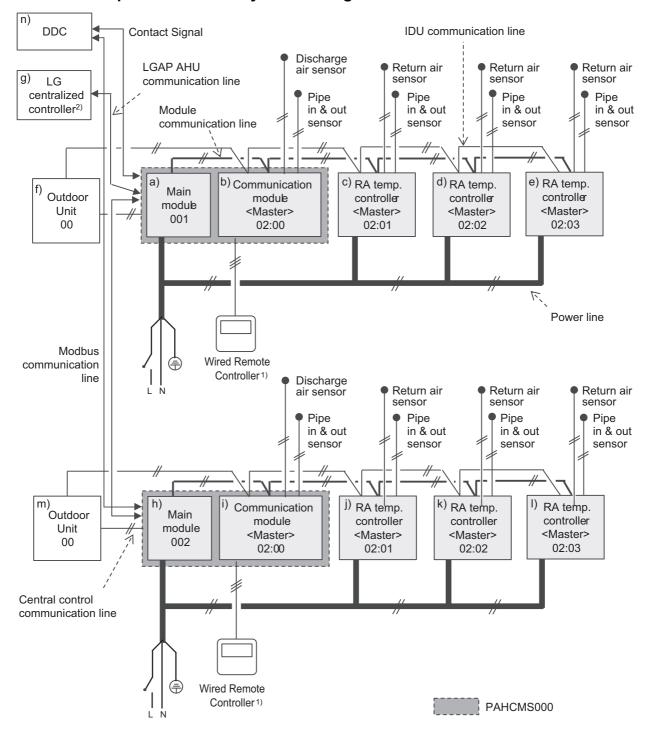

■ Case 6 : One AHU with multiple coils / DDC by Modbus

	Name	Address to set	Address input method	Note
a)	Main Module #1	1	by tact switch of Main module	For the Modbus communication - Please see "Main Module Address Setting"
b)	Communication Module #1	00 (Fixed)	by remote controller	Please go to "Address Setting" of Installer setting Function code 02
c)	Main Module #2	2	by tact switch of Main module	For the Modbus communication - Please see "Main Module Address Setting"
d)	Communication Module #2	00 (Fixed)	by remote controller	Please go to "Address Setting" of Installer setting Function code 02
e)	Outdoor Unit #1	00 (Fixed)	by tact switch of outdoor unit.	The address of outdoor unit should be same as communication Module of PAHCMS000 - Please see "ODU installation manual"
f)	Outdoor Unit #2	00 (Fixed)	by tact switch of outdoor unit.	The address of outdoor unit should be same as communication Module of PAHCMS000 - Please see "ODU installation manual"
g)	LG Central Controller	1	by central controller's installation function	It should be matched with Main module's address.

- 1) Remote controller should be connected to PAHCMS000 and remote controller connected to PAHCMR000 unit can only monitor status.
- 2) LG Central controller addressing for discharge air temp. controller should be set as the same address of the main module's address.
 3) Address of Comm. module of PAHCMS000 (Central control address) must be set to '00'. The address for additional PAHCMR000 must be set with an order increasing by 1. Also ODU address must be the same as the paired AHU controller.
- 4) All PAHCMR000 units need to be set as Master mode.

■ Case 7: Multiple AHUs / DDC by Contact Signal

	Name	Address to set	Address input method	Note	
a)	Main Module	1	by tact switch of Main module	For the Modbus communication - Please see "Main Module Address Setting"	
b)	Communication Module	00 (Fixed)			
c)	RA temp. Controller #1	01 (Fixed)	by romato controller	Please go to "Address Setting" of Installer setting.	
d)	RA temp. Controller #2	02 (Fixed)	by remote controller	- Function code 02	
e)	RA temp. Controller #3	03 (Fixed)			
f)	Outdoor Unit	00 (Fixed)	by tact switch of outdoor unit.	The address of outdoor unit should be same as communication Module of PAHCMS000 - Please see "ODU installation manual"	
g)	LG Central Controller	1 and 2	by central controller's installation function	It should be matched with Main module's address.	
n)	DDC		Don	n't care	
h)	Main Module	2	by tact switch of Main module	For the Modbus communication - Please see "Main Module Address Setting"	
i)	Communication Module	00 (Fixed)			
j)	RA temp. Controller #1	01 (Fixed)	by romato controller	Please go to "Address Setting" of Installer setting.	
k)	RA temp. Controller #2	02 (Fixed)		- Function code 02	
I)	RA temp. Controller #3	03 (Fixed)			
m)	Outdoor Unit	00 (Fixed)	by tact switch of outdoor unit.	The address of outdoor unit should be same as communication Module of PAHCMS000 - Please see "ODU installation manual"	

- 1) Remote controller should be connected to PAHCMS000 and remote controller connected to PAHCMR000 unit can only monitor status.
- 2) LG Central controller addressing for discharge air temp. controller should be set as the same address of the main module's address.
- 3) Address of Comm. module of PAHCMS000 (Central control address) must be set to '00'. The address for additional PAHCMR000 must be set with an order increasing by 1. Also ODU address must be the same as the paired AHU controller.
- 4) All PAHCMR000 units need to be set as Master mode.
- 5) Return air sensors connected RA temp. controller (PAHCMR000) do not need to installed at the duct. They work as dummy sensors. They work as dummy sensors.

9.4 Fan & Alarm interlock guide

■ Return air temperature controller

If DO Type setting(SW 1-3) set as 'Status', fan operating signal can be interfaced with operation status signal at 'DO 1' in 'DIGITAL OUTPUT'

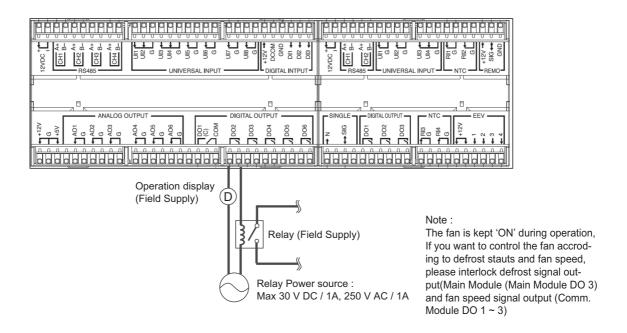

Note:

The fan is kept 'ON' during operation, If you want to turn off the fan during TH off or defrost or control by fan speed, please refer to dip switch setting SW1-3&SW1-4 of Comm. module

■ Discharge air temperature controller

Fan operating signal can be interfaced with operation status signal at 'DO 2' in 'DIGITAL OUTPUT' of main module.

10.1 By Individual Controller

	Function List	PAHCMR000	PAHCMS000
	Operating On / Off	0	0
	Operation Mode Control	Cooling / Heating only	Cooling / Heating only
	Desired Return Air Temperature Setting	16~30 ℃	X
	Return Air Temperature Display	11~39.5 ℃	X
Basic Function	Desired Discharge Air Temperature Setting	Х	16 ~ 30 °C ⁴⁾ 12 ~ 50 °C ⁵⁾
	Discharge Air Temperature Display	Х	11 ~ 39.5 °C ⁴⁾ 0 ~ 100 °C ⁵⁾
	Fan Speed Control	O 1)	X
	Child Lock / All button Lock	X	X
	Schedule	0	0
	Partial Lock	0	X
	Dual Set point	X	X
	Pipe Temperature display	O ²⁾	O ²⁾
Advanced Function	Error Code Display	0	0
	Defrost Status	Defrost / Normal	Defrost / Normal
	Compressor Status	On / Off	On / Off
	Filter Sign	-	-
	Error History	O 3)	X
ETC	Unit of Temperature control	1 ℃ / 0.5 ℃	1 °C / 0.5 °C
EIC	Electric Failure compensation	0	0

- Please see Chapter 7 for the compatibility of each product with AHU controller
- Control function is unavailable when Control Type of AHU controller is Contact Signal (Dip SW1-2 of PAHCMR000 or SW1-1 of PAHCMS000 is off)
- · For using Wireless remote controller, Wired remote controller is required(Standard III doesn't has a receiver for wireless remote controller)
- Partial Lock function is available only with Standard III/Premium remote controller
- For more details, please refer to the product manual of remote controller
 - 1) For fan speed control, it is necessary to set Dip SW 1-3 'On'
 - 2) Pipe temperature display is unavailable in Simple remote controller
 - 3) Error history is available with Standard III remote controller only
 - 4) Wired remote controller standard II.
 - 5) Wired remote controller standard III after version 2.10.5a.

10.2 By LG Central Controller

	Function List		PAHCMR000	PAHCMS000
	Operating On/Off		0	0
	Operating Mode Control		Cooling / Heating only	Χ
	Desired Return Air Temperate	ure Setting	16.0 ~ 30.0 °C ¹⁾	Χ
Deels Franckism	Return Air Temperature Displ	ay	-50.0 ~ 100.0 ℃	Х
Basic Function	Desired Discharge Air Tempe	erature Setting	X	16.0 ~ 30.0 ℃
	Discharge Air Temperature D	isplay	X	-50.0 ~ 100.0 °C
	Fan Speed Control		O ²⁾	X
	All Lock		0	Χ
	Schedule		0	0
	Partial Lock		0	Χ
	Pipe Temperature		O 3) 4) 5)	X
Additional function	Error Code Display		0	0
Idilotto	Defrost Status		X	Χ
	Outdoor unit Cycle Monitoring	g	O ^{3) 4) 5)}	Χ
	Emergency Stop		O ⁴⁾	0
	Peak Control	Priority control	O 4) 5)	Х
Auta Cantral	reak Control	ODU capacity control	X	X
Auto Control	Time limit control		O ^{4) 5)}	X
	Device Interlocking		O ^{4) 5)}	Х
	Power Consumption		X	Χ
Energy Report	Run time		O ^{4) 5)}	Х
	Save to PC or USB		O ^{4) 5)}	X
112.4	Report		Error ⁴⁾ / Control ^{4) 5)}	Error / Control
History	Save to PC or USB		O 4) 5)	0
FTC	Unit of Temperature control		1 ℃ / 0.5 ℃	1 ℃ / 0.5 ℃
ETC	Remote Access		O ^{4) 6)}	0

- · Please see Chapter 7 for the compatibility of each product with AHU controller
- Control function is unavailable when Control Type of AHU controller is Contact Signal (Dip SW1-2 of PAHCMR000 or SW1-1 of PAHCMS000 is off)
- PI485GW is required for connecting Single Split
 - 1) This range can be varied depending on central controller type
 - 2) For fan speed control, it is necessary to set Dip SW 1-3 'On'
 - 3) This function may not be available for a certain outdoor unit type
 - 4) This function is not available with AC Ez
 - 5) This function is not available with AC Ez Touch
 - 6) Internet connection is required to access central controller from outside

10.3 BMS protocol

10.3.1 BACnet points of PAHCMR000

■ AHU Control / Monitor point

Na	No. Name Object Name Object				Unit

- 1) Regarding capacity ratio, you can refer to the Capacity setting table of UI7(0~10V) of PAHCMS000
- 2) Error Code: 1 x yyy (x: Module Number, yyy: Error Code)
 3) In case of connecting a wired remote controller standard II, this range of target temperature can be set.
- 4) In case of connecting a wired remote controller standard III, this range of target temperature can be set.

11. Appendix

Calculation of additional refrigerant

◆ For Multi V(VRF) System

With R410a refrigerant ODU, for each dm³ of volume 0.2941 kg must be added, to the amount calculated for pipe length. With R32 refrigerant ODU, for each dm³ of volume 0.2172 kg must be added, to the amount calculated for pipe length.

◆ For Single Split System

With R410a refrigerant ODU, for each dm³ of volume 0.2941 kg must be added, to the amount calculated for pipe length.

With R32 refrigerant ODU, for each dm³ of volume 0.2172 kg must be added, to the amount calculated for pipe length. And in case Single Split models you have to take into account some additional information: Prefilled amount for pipe, prefilled amount for IDU and maximum total amount of the system.

♦ The calculation is the following:

Pre charge Amount included pre charged pipe length(A) - IDU CF (B) + additional charging amount for piping length. $\{(Total\ pipe\ length - charge\ less\ pipe\ length\ (C))\ x\ [kg/m]\ (D)\} + AHU\ additional\ charging\ amount\ (E)$ $\leq Maximum\ refrigerant\ amount\ of\ total\ system\ (F)$

The total of Unit, Pipe and AHU Coil may never exceed the maximum refrigerant amount of the total system (E). This means, although the max pipe length is longer, pipe length may be limited due to the total system amount possible with Single Split units.

- Example) Model UU48W (R410A),
 - Maximum Pipe length: 75 m, Total pipe length for this example: 30 m, AHU coil volume (dm³)
 - » Pre charge Amount included pre charged pipe length(A): 3.40 kg, IDU C.F. (B): 1.20 kg
 - Changeless pipe length (C): 7.50 m
 Additional charge amount for pipe (D): 0.040 kg/m
 Additional charge amount for coil (E): 0.2941 kg/dm³ for R410A refrigerant
 - » Maximum total refrigerant amount (F): 6.10 kg
 - » Additional refrigerant amount is,

 $3.40 - 1.20 + {(30 - 7.50) \times 0.040} + (AHU Coil volume(dm³) \times 0.2941) \le 6.10 \text{ kg}$
